DETAILED ACTION

This action is in response to the submission filed on 12/4/08. Claims 1 and 3-6 are presented for examination.

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

1. Claims 1 and 3-6 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.
2. Claims 1 and 3-6 appear to be directed to an open-ended, abstract, manipulation of data. No practical application is claimed, and the data that is simulated is not connected to the real world in any ascertainable manner.

Allowable Subject Matter

3. Gürsoy and Ju teach a method for labeling multi material data, the steps including acquisition of external data, storage of cell data through octree division of the external data, and simulation using the cell data. However, these references and the remaining prior art of record fails to disclose or suggest "(D1) assigning all the non-boundary cells space numbers different for respective spaces partitioned by boundary data; and (D2) assigning each vertex of the boundary cell the space number of the neighboring non-boundary cell that is not partitioned by

the boundary data" in combination with the remaining elements and features of the claimed invention.
